

Allianz Benelux

October 2, 2026

Re : IT Economics Manager

Allianz Benelux is building a role that sits at the intersection of IT governance and financial steering, with direct visibility to the COO and CIO. That combination, financial rigor applied to a large IT portfolio inside an insurance group, is exactly where I want to put 25 years of experience in insurance and in finance to work.

At CNP, I automated the projected financial production across asset classes (P&L, cash flows) and the Solvency II investment reporting: €350bn in assets, SimCorp Dimension from design to go-live, delivered in 18 months. That mission required the same discipline this role calls for: budget coordination across Finance and IT stakeholders, variance tracking, and executive-level reporting under a strict implementation calendar. At Coface, I built IFRS 9 rolled out in stages over four years, through successive POCs, ECL methodology, accounting schemas, UAT, and coordination with the depositary CACEIS, alongside a Data Warehouse for investments covering field design, table structure, and input/output controls. Four years at SCOR, including two as chief transformation officer of the investment function, gave me direct exposure to steering committees where financial insight had to translate into decisions for the COO and CIO level, not just reporting for its own sake. As senior programme director at Clearwater, I ran several parallel implementations of an R to R SaaS solution remotely, with monthly sponsor committees at executive level and consolidated tracking of deliverables, milestones, and resources on Monday.com. Hybrid work and distributed teams are a normal part of how I operate, and that experience translates directly to steering an IT financial portfolio across Brussels and the wider Allianz Technology network.

Allianz's scale and its group-wide IT Taxonomy make this a natural fit for someone who has already built cost transparency and reporting discipline inside large insurance organizations.

Certified in Generative AI Primer (Vanderbilt, 2026) and GenAI for Account Executives (Yale, 2026), I now automate most of my entrepreneurial activity through AI agents under Claude or GPT, which fits the analytics and automation ambitions mentioned for this role.

I operate as an independent consultant today. Nevertheless, I am perfectly open to a permanent role, directly or after an initial engagement period.

I would be happy to discuss how this experience applies to the RtC cost model and the IT Steering Board reporting Allianz Benelux needs.

Best regards,

Xavier Robitaille
