Re : Finance Transformation (Senior) Manager (m/f/d)

Leading CFOs through Gen-AI adoption, agentic workflows, and next-generation ERP replacement, while keeping regulatory reporting intact, is a different brief from a standard finance system migration.

At CNP, I rebuilt the investment accounting production line under Solvency II constraints: 350 billion euros of assets under management, delivered in 18 months, on time, with IFRS 9 categorization and amortized cost calculations running correctly from day one. That kind of rebuild only works if operating model redesign and technical implementation move together, which is exactly what this role asks for on the ERP and TMS side.

I've also led SimCorp Dimension and Clearwater Analytics implementations end to end, from solution design through UAT and cutover, including VBA-based automation to clear suspense accounts during data migration: the kind of hands-on delivery discipline that keeps a digital finance program from stalling during execution.

My Python and AI/ML exposure comes from recent Generative AI certifications at Vanderbilt and Yale rather than production coding; the finance, regulatory, and delivery side of this role is where I add value fastest.

Remote and hybrid delivery is standard practice for me, Clearwater was fully remote, and I run distributed teams and stakeholder relationships without friction. Worth a call?
