Re : Manager for our Business Transformation - Investment Management Team

Leading transformation for global investment management players in Luxembourg means bridging operating model redesign, regulatory depth (IFRS 9, IFRS 17, Solvency II) and the automation layer clients now expect on top. That combination is exactly where I've spent the last 25 years working.

At CNP, I rebuilt investment accounting production under Solvency II constraints, covering 350bn€ in assets under management, delivered in 18 months on schedule. That work required aligning Finance, Actuarial and IT on a single operating model, the kind of stakeholder friction this role will manage daily. On the systems side, I've taken SimCorp Dimension and Clearwater Analytics implementations from design through production, including sub-ledger accounting for securities and interface migrations, which maps directly onto the automation and process design this team offers clients. I've also run PMO governance on complex programs where clarity of scope and delivery discipline decided whether the project landed on time.

I haven't formally managed junior consultants as direct reports. My leadership experience comes from running cross-functional teams across Finance, Actuarial and Risk on delivery, not from people management within a consulting bench.

Hybrid work is standard practice for me. My most recent engagement, on Clearwater Analytics, ran fully distributed with no loss of delivery pace. Happy to walk through how this translates to the Business Transformation team's current priorities.
