

## Crossing Hurdles

July 31, 2026

### Re : Finance Project Manager | Remote

Owning finance data pipelines end to end for top AI Lab clients, while keeping Human Data Managers and subject-matter experts accountable for quality and compliance, is a demanding brief.

I've built and delivered exactly this kind of infrastructure. I led SimCorp Dimension and Clearwater Analytics implementations from design through go-live, covering investment accounting sub-ledgers under IFRS 9 and Solvency II constraints, where accuracy mattered because the numbers fed regulatory reporting downstream. On migration projects, I owned the cahiers des charges, ran UAT cycles, and built VBA-based OD generation to clear suspense accounts and reconcile legacy interfaces, which is exactly the data quality discipline finance-heavy pipelines need. I've also run PMO/AMOA mandates where the harder task was getting Finance, Actuarial, IT and Risk stakeholders, each with different priorities and different definitions of done, to work off the same plan, reporting progress and risk directly to senior leadership throughout.

My finance data pipeline experience comes from insurance and asset management, not from AI model training environments; I haven't worked inside an AI Lab data-labeling operation before.

My most recent engagement, on Clearwater Analytics, ran fully remote, so distributed delivery is simply how I work now. As a contractor who is a non-UK Tax resident, based overseas, IR35 does not apply to me.

Happy to walk through how this experience maps to your finance workflows on a call.
