Re : Program Manager / Sr. Project Manager

A 12-month program spanning IT, an outside agency, and business stakeholders needs PMBOK-level discipline in scope, schedule, and requirements management from the first week. That's the core of this Program Manager role.

At CNP, I rebuilt investment accounting production under Solvency II constraints: 350 billion euros in assets under management, delivered in 18 months, on schedule, with actuarial, IT, and finance teams that had never worked from one shared plan before. That's the kind of cross-functional coordination this role needs with IT management and outside agency personnel.

On a separate assignment, I owned a full accounting interface migration: I wrote the cahier des charges, ran UAT (recette) end to end, and caught data breaks before they hit production. I built the scope, schedule, and requirements documentation myself, the same discipline this role expects around structured requirements gathering and project tracking.

I hold the PMP certification (PMI, 2025) and have run project governance on complex, high-visibility programs for 25 years, always in insurance and finance, under regulatory and audit pressure.

I don't have direct Medicaid or BCBS integration experience. My regulatory and stakeholder-management background is entirely insurance and finance, not healthcare.

Worth a call to see where the fit works and where it doesn't?
