Re : Consolidation Reporting Manager

Leading consolidation cycles for mid-market groups while absorbing external growth operations and pushing an AMOA agenda on evolving accounting rules is a specific kind of complexity: technical depth, regulatory pressure, and delivery discipline at once.

At CNP, I rebuilt the investment accounting production line under Solvency II constraints, covering 350 billion euros in assets under management, delivered in 18 months, on schedule. The work required IFRS 9 categorization logic (ECL, amortized cost, ASD) and a full sub-ledger redesign, the kind of technical standard-setting your clients will need when upgrading their reporting frameworks.

I've also run closing redesigns and fast-close programs, cutting reconciliation cycles and clearing suspense accounts through structured apurement plans, sometimes building OD automation in VBA where systems couldn't keep up. On the systems side, I've taken SimCorp Dimension and Clearwater Analytics implementations from design to production, exactly the EPM tooling background the role calls for.

My consolidation experience sits mostly at the investment sub-ledger level rather than statutory group consolidation with scope changes and intercompany eliminations. I'd bring the technical and regulatory depth; the group consolidation mechanics themselves I'd need to calibrate quickly.

Would you have 30 minutes this week to go through the CNP program in detail?
