Dear Wavestone Hiring Team,

I'm applying for the Senior Consultant role in Insurance Transformation because my 25 years in insurance and finance—100% in these sectors—directly match what you're building.

What you need: someone who translates between finance/actuarial complexity and IT delivery, who understands SAP S/4HANA in insurance contexts, and who can own transformation workstreams without hand-holding. I've done exactly this work.

Last three years: I led financial process redesign for a €2B+ insurance group preparing for SAP S/4HANA migration—accounting, controlling, statutory reporting. Designed the target operating model, built the control framework, managed stakeholder alignment across Finance, Actuariat, and IT. The deployment landed on time. Before that, six-month interim as Finance Manager for another insurer, restructuring the CFO office and closing processes while regulatory reporting was live—the kind of high-stakes environment where clarity and execution matter more than politics.

I know SAP BTP ecosystem (Integration Suite, Datasphere). I've worked insurance-specific regulatory constraints (Solvency II, IFRS 17, local statutory filing). I'm comfortable at the interface between fachbereich and IT—I speak both languages without needing translation.

One real difference: I've been independent for three years and thrive there. I'm genuinely interested in becoming embedded in a team again, but I want to be direct about what that shift means for both of us. I'm looking for something substantial where I can contribute beyond the consulting engagement model.

I'm based in France, relocating to Germany is straightforward for the right opportunity.

Let's talk. You can reach me at xro@xavier-robitaille.com or +33 6 64 89 09 43.

Best,
Xavier Robitaille
