Re : Regulatory Project Manager - Life Insurance (Freelance optional)

EngiFlex positions this role at the point where regulatory change meets life insurance product delivery, with Solvency II, IDD, ESG and AML all moving at once and Belgian/EU requirements getting more demanding by the year. That is the kind of cross-functional pressure point I have spent 25 years working in, across insurance and finance.

At CNP, I automated the projected financial production across asset classes (P&L, cash flows) and the Solvency II investment reporting: €350bn in assets, SimCorp Dimension from design to go-live, delivered in 18 months. That meant coordinating finance, actuarial and IT teams around a regulatory deadline that could not move, which is close to what this role asks for on a recurring basis. At Coface, IFRS 9 was rolled out in stages over four years: successive POCs, ECL methodology, accounting schemes, UAT, coordination with the depositary CACEIS. I also built a Data Warehouse for investments there, covering field definitions, table structure, and input/output controls, the same translation work the JD describes between regulatory requirement and system configuration. More recently, as senior programme director at Clearwater, I ran several parallel implementations of a SaaS R to R solution, with monthly sponsor committees at senior management level and consolidated tracking of deliverables, milestones and resources on Monday.com, including a Luxembourg client, Luxempart. That mission was run fully remote, so hybrid work and distributed stakeholder management are not new territory for me; I know how to keep a steering committee aligned and a risk log current without being in the same room.

I completed the full examination track of the Centre d'Études Actuarielles in 2004, which gives me a direct read on actuarial inputs like BEL and provisioning when they intersect with regulatory reporting, rather than treating them as a black box handed over by another team.

I operate as an independent consultant today. Nevertheless, I am perfectly open to a permanent role, directly or after an initial engagement period, and a freelance arrangement works equally well if that better fits EngiFlex's plans for this position.

I would be happy to discuss how this background applies to your current Solvency II and IDD workstreams.

Best regards,
