

AXA Partners

October 3, 2026

Re : Chief Data Officer F/H

AXA Partners is building a single data platform across 14 regions and 5 central functions, replacing fragmented legacy architecture with an AI-driven one. That scope, and the scale of AXA Group behind it, is what draws me to this role.

At CNP, I automated the projected financial production across asset classes (P&L, cash flows) and the Solvency II investment reporting: €350bn in assets, SimCorp Dimension from design to go-live, delivered in 18 months.

At Coface, I rolled out IFRS 9 in stages over four years, through successive POCs, ECL methodology design, accounting schemes, UAT, and coordination with the depositary CACEIS. I also built an investment Data Warehouse there, covering field design, table structures, and input/output controls.

As senior programme director for Clearwater Analytics, I ran several parallel implementations of an R-to-R SaaS solution, with monthly sponsor committees at executive level and consolidated management of deliverables, milestones, and resources on a dedicated tool (Monday.com), including for Luxempart in Luxembourg.

Four years at SCOR, two of them as chief transformation officer of the investment function, gave me the executive-level view this role needs across matrixed, cross-border stakeholders.

Certified in Generative AI Primer (Vanderbilt, 2026) and GenAI for Account Executives (Yale, 2026), I now automate most of my entrepreneurial activity through AI agents running on Claude or GPT.

I operate as an independent consultant today. Nevertheless, I am perfectly open to a permanent role, directly or after an initial engagement period.

I would be happy to discuss how this experience applies to AXA Partners' data unification across 14 regions.

Best regards,

Xavier Robitaille
