Re : Vice President of Financial Systems

Bringing financial planning, reporting, and accounting platforms together across multiple jurisdictions, while keeping multi-currency consolidation accurate under IFRS and Solvency II, is where most financial systems programs stall.

At a French insurer, I rebuilt the investment accounting sub-ledger under Solvency II and IFRS 9 constraints, covering categorization, amortized cost, and ECL calculations for a portfolio in the hundreds of billions of euros. I led the implementation of SimCorp Dimension and Clearwater Analytics end to end, from requirements definition through vendor coordination to production cutover, bringing finance, actuarial, and IT teams onto a single data model. On a separate mandate, I ran a full data migration and legacy interface cutover, writing the cahier des charges, driving UAT, and building VBA-based journal entry construction to clear suspense accounts before go-live. I also redesigned month-end closing processes to cut cycle time while strengthening reconciliation controls, work directly relevant to the governance and audit requirements this role demands across public and private markets.

I have not managed a corporate-wide EPM platform like Anaplan or OneStream. My systems depth is in investment accounting and regulatory reporting, not corporate planning tools.

Happy to walk through specifics on a call.
