Re : Group Data & AI Strategy and Strategic Partnerships Lead

Translating a Group-wide data and AI strategy into priorities that a federated insurance group's operating entities will actually adopt, and negotiating partnerships that secure preferential access with hyperscalers and AI platforms, is the mandate here.

Twenty-five years in insurance and finance transformation gave me the pattern for this kind of work: get Finance, Actuarial, IT, Risk and local entities moving in one direction without collapsing their autonomy, then hold vendors and delivery teams accountable to it. At CNP Assurances, I rebuilt investment accounting production under Solvency II constraints, 350bn€ in assets under management, delivered in 18 months, on time, across teams that didn't report to each other. That required the same skill this role needs: getting a federated organization to move on shared priorities through evidence and relationships, not hierarchy. I've also taken systems from design through production, SimCorp Dimension and Clearwater Analytics implementations, where negotiating scope, data models and delivery commitments with vendor teams shaped whether the business case held. That's direct experience owning partnership agreements and holding providers to measurable outcomes.

I haven't negotiated hyperscaler agreements or led AI/ML deployment at scale. My AI exposure so far is coursework, Vanderbilt and Yale in 2026, not enterprise deployment.

Worth a call to see if the insurance and negotiation depth offsets that gap for what this role needs.
