Re : Head Reporting & Analytics SRE/SRI (Hybrid; m/f/x/d; 80-100%)

Rolling out the Legal Entity Dashboard while keeping Lux GAAP, Solvency II and Solvency UK reporting compliant across SRE/SRI branches and their entities is a demanding combination: build for the next few years while the current submissions still have to land on time.

I've spent the past years inside that exact tension. On the regulatory side, I've built ORSA, RSR/SFCR and QRT packages and worked through IBNR and BEL provisioning methodologies, so the logic behind Solvency II submissions is familiar territory. On the systems and data side, I've taken SimCorp Dimension and Clearwater Analytics implementations from design through to production, including the investment accounting sub-ledger that feeds statutory and regulatory reporting, and redesigned closing processes to cut cycle time without loosening controls. I've also led data migration and legacy account clearing (apurement de suspens), building the UAT scripts and VBA-based journal entry logic that kept the cutover auditable. Coordinating finance, actuarial, IT and risk stakeholders through that kind of turnaround is where I add the most value.

What I haven't done is run a permanent reporting team of 6 to 7 people day to day. My leadership experience is project-based, not line management.

Hybrid work is standard practice for me: at Clearwater, most of the delivery ran remotely across time zones, with the same discipline as on-site work.

Worth a conversation on where this fits your reporting agenda?
