Re : Senior Business Change Manager (Reinsurance)

Driving change management across a multi-year reinsurance transformation, with conflicting stakeholder demands split between Finance, Actuarial, IT and Risk, and delivery running both Agile and Waterfall, is a specific kind of complexity, not a generic change brief.

I've managed that complexity before, on large-scale, cross-country programs in insurance and asset management. At CNP, I rebuilt investment accounting production under Solvency II constraints: €350bn in assets under management, delivered in 18 months, on time, with Finance, Actuarial and IT working from a single operating model. I led a SimCorp Dimension and Clearwater Analytics implementation from design through to production, building the change adoption plan that got Middle Office, Back Office and Finance teams operating on the same platform. On IFRS 17 and IFRS 9 transformations, I ran impact assessments across systems, processes and people, then negotiated the rollout plan with business leaders who had opposing priorities.

I haven't worked on reinsurance treaties specifically. My insurance experience covers French GAAP, IFRS and Solvency II across life and non-life books, not reinsurance contracts themselves.

Hybrid working is standard practice. On my last assignment with Clearwater, I ran the engagement remotely with structured on-site time, and I'd set up the same rhythm here. As a contractor who is a non-UK Tax resident, based overseas, IR35 does not apply to me. I'd like to walk you through the CNP and Clearwater programs on a call.
