Re : Principal Business Consultant - Front Office

Advising asset managers and insurers on SimCorp Dimension across portfolio management, trading, or Solvency II reporting means sitting between business need and system configuration, often on projects where the client's own teams don't yet know what the target operating model looks like. That gap is where I've spent most of my career.

At CNP, I rebuilt investment accounting production under Solvency II constraints for a book of 350 billion euros in assets, delivering the redesign in 18 months and on schedule, with the sub-ledger and accounting schemes aligned to both French GAAP and IFRS reporting. On another mandate, I ran the migration and cutover of accounting interfaces for a portfolio of securities, building the UAT test scripts and clearing the resulting suspense accounts down to zero before go-live, using VBA to reconstruct the missing journal entries. I've also worked directly on Clearwater Analytics implementations, covering the same instrument valuation and analytics scope this role expects for SimCorp Dimension, from plain vanilla fixed income to OTC derivatives, and I know what "trusted advisor" means when a client's finance, actuarial, and IT teams disagree on the target design.

I don't have direct experience with performance attribution modules specifically, though my work has covered valuation, risk, and regulatory reporting closely enough to move fast there.

I currently work independently but I'm open to a permanent role in Paris, whether that starts directly or after an initial mission period. Happy to talk this through.
