I bring 25 years of insurance and finance transformation experience—exactly what Deutsche Börse's Post Trading division needs to execute complex, cross-divisional programs with discipline and clarity.

What you're looking for is someone who can translate strategic intent into executable roadmaps, run tight governance, and keep senior stakeholders aligned through change. I've done this repeatedly: I've designed PMO frameworks from scratch, led multi-workstream initiatives spanning Finance, Operations, Technology, and Risk simultaneously, and delivered transparent executive-level tracking that actually drives decisions rather than just reporting status.

On a recent 18-month engagement as Interim Finance Manager for a major French insurer, I architected the complete redesign of their financial close process across 12 business units—restructured roles, redefined controls, implemented new tools. The program had 47 dependencies, involved 9 functional teams, and delivered €2.8M in sustainable efficiency gains. I built the governance cadence (monthly steering, weekly ops reviews), tracked KPIs against original targets, and escalated trade-offs to C-suite when sequencing decisions mattered. No vague dashboards. Clear ownership. Predictable delivery.

I've also led due diligence workstreams on transaction-driven initiatives for insurance M&A—confidential, high-pressure, where gaps in planning compound fast. This taught me how to move from strategic concept to decision-ready proposals quickly.

The honest gap: I'm currently a consulting sole proprietor. You're hiring for a CDI role. That works if you value someone who chooses this position because the scope and stakes matter—not because they need a W-2 next month. I'm available immediately and looking to anchor in a role where strategic delivery and stakeholder discipline are non-negotiable.

I'd welcome a conversation about how you structure governance in Post Trading and what your current delivery challenges look like.
