Re : Senior Manager Insurance Finance Transformation

Helping insurers turn Solvency II, IFRS 17 and IFRS 9 requirements into a working operating model, while managing CFOs and juggling several projects at once, is exactly the kind of mandate that sits at the center of my work. Ensur's focus on finance transformation for the top insurers in Belgium, rather than generic consulting, is what makes this role worth pursuing.

At CNP, I rebuilt the investment accounting production chain under Solvency II constraints, covering 350 billion euros in assets under management, delivered in 18 months and on schedule. That project meant redesigning sub-ledger processes, aligning IFRS 9 categorization (amortized cost, FVOCI, ECL) with actuarial and risk teams, and running UAT cycles that touched both finance and IT. Separately, I've led SimCorp Dimension and Clearwater Analytics implementations end to end, from design through go-live, work that required translating a business architecture into a technology one while managing internal and external stakeholders across finance, IT and operations. I've also built VBA-based tools to automate journal entry generation and clear suspense accounts during closing, which is the kind of process automation this role asks for.

Hybrid work is standard practice for me. My most recent engagement at Clearwater ran fully in that mode, coordinating distributed teams across time zones without losing delivery pace.

I don't have direct P&C reserving experience; my provisioning background is on investments and credit risk.

Would a call this week make sense to go through the details?
