I'm a finance and insurance specialist with 25 years building controllership functions, managing GL reconciliations, and embedding financial controls in complex environments. This 12-month contract at TMHCC aligns directly with what I do best.

Over the last five years, I've embedded controllership frameworks for mid-cap and specialty insurers. Most recently, I redesigned the GL control structure for a €2bn reinsurance portfolio, establishing source-to-ledger reconciliations, building audit evidence protocols, and reducing month-end close variance by 60%. I've also led regulatory reporting redesigns (Solvency II, local GAAP) and supported external auditors through substantiation of material balances on both income statement and balance sheet accounts.

What matters here: I understand the specific pressure of new functions. The controllership remit you've outlined—custodianship of the GL, embedding controls, supporting Schedule F and SRS reporting, managing dual accounting systems—is something I've done multiple times. I'm comfortable with the hybrid setup and can hit the ground running on your reinsurance and gross accounting reconciliations.

The honest conversation: I'm self-employed, so I'm used to moving fast and owning outcomes. I'm not looking for "office time"—I see the three days minimum as useful for building relationships with your team and auditors. I'm genuinely interested in a defined scope, clear handover at month 12, and a team that values precision over politics.

I'm available to start within two weeks. Happy to walk through specific examples from my recent work if that's useful.
