Re : Strategy Consultant (Remote)

Fortune 500 technology clients need strategic recommendations that hold up under executive scrutiny, backed by data that actually supports the case. That is the exact intersection where I work.

At Clearwater, I served as senior programme director, running several parallel SaaS implementations of an R to R solution for clients including Luxempart in Luxembourg. Monthly sponsor committees at executive level, consolidated tracking of deliverables, milestones and resources on Monday.com. The work was fully remote, and I built the governance and reporting discipline to make that setup work at executive level, not just at project level.

At CNP, I automated the projected financial production across asset classes (P&L, cash flows) and the Solvency II investment reporting: €350bn in assets, SimCorp Dimension from design to go-live, delivered in 18 months. That kind of scale forces a business case to be precise about ROI and measurable outcomes, which is what this role asks for.

At Coface, IFRS 9 rolled out in stages over four years: successive POCs, ECL methodology, accounting schemas, UAT, coordination with the depositary CACEIS. I also built the investment Data Warehouse there, defining fields, table structure, and input/output controls, which is the kind of data foundation that makes analysis and dashboards (Tableau, Power BI) reliable rather than cosmetic.

Certified in Generative AI Primer (Vanderbilt, 2026) and GenAI for Account Executives (Yale, 2026), I now automate most of my own consulting workflow through AI agents under Claude or GPT, which speeds up analysis and business case turnaround on remote engagements.

I operate as an independent consultant today. Nevertheless, I am perfectly open to a permanent role, directly or after an initial engagement period.

I would be happy to discuss how this experience applies to the strategic and operational challenges facing your Fortune 500 clients.

Best regards,

Xavier Robitaille
