Re : Financial Services Consultant (Remote)

Financial infrastructure for a global gig-economy platform needs transaction flows that move fast, compliance that holds under volume, and risk controls that don't break as the platform grows. That combination, in insurance and in finance, is where I've spent the last 25 years.

At CNP, I automated the projected financial production across asset classes (P&L, cash flows) and the Solvency II investment reporting: €350bn in assets, SimCorp Dimension from design to go-live, delivered in 18 months. At Coface, IFRS 9 was rolled out in stages over four years: successive POCs, ECL methodology, accounting schemes, UAT, and coordination with the depository CACEIS. I also built the Coface investment Data Warehouse there, from field definitions and table structures to input and output controls. Most recently, as senior programme director at Clearwater Analytics, I ran several parallel implementations of a SaaS R to R solution, with monthly sponsor committees at executive level and consolidated tracking of deliverables, milestones, and resources on Monday.com; one client was the Luxembourg-based Luxempart.

That work was already remote and hybrid by design. Clearwater's programmes ran across time zones with distributed teams, and I'm comfortable with the discipline that requires: structured governance calls, clear reporting cadences, documentation that holds without someone in the room.

I operate as an independent consultant today. Nevertheless, I am perfectly open to a permanent role, directly or after an initial engagement period. As a contractor who is a non-UK Tax resident, based overseas, IR35 does not apply to me.

I would be happy to discuss how this experience applies to your compliance and risk mitigation needs for gig-economy transaction structures.

Best regards,

Xavier Robitaille
