Re : Senior Director, Accounting & Controlling

Building a modern accounting function while scaling across entities, systems, and jurisdictions is where the hard problems in finance transformation live right now, and it's the environment where I want to put 25 years of insurance and finance experience to work.

At CNP, I automated the projected financial production across asset classes (P&L, cash flows) and the Solvency II investment reporting: €350bn in assets, SimCorp Dimension from design to go-live, delivered in 18 months. That work required the same discipline this role asks for: owning a full reporting engine end to end, across multiple stakeholders, on a fixed timeline.

At Coface, IFRS 9 rolled out in stages over four years: successive POCs, ECL methodology, accounting schemas, UAT, coordination with CACEIS as depositary. Alongside that, I built a Data Warehouse for investments there, covering field definitions, table structure, and input/output controls. That combination of technical accounting depth and systems thinking maps directly onto the revenue recognition, commissions, and intercompany work this role covers.

As senior programme director at Clearwater, I ran several parallel implementations of an R to R SaaS solution, with monthly sponsor committees at executive level and consolidated tracking of deliverables, milestones, and resources on Monday.com, including for Luxempart in Luxembourg. That's the same operating model needed here: a distributed team, multiple entities, one control framework.

Certified in Generative AI Primer (Vanderbilt, 2026) and GenAI for Account Executives (Yale, 2026), I now run most of my own consulting activity through AI agents on Claude and GPT, which is a direct match for the automation and AI-enabled workflow priorities in this role.

I operate as an independent consultant today. Nevertheless, I am perfectly open to a permanent role, directly or after an initial engagement period.

I would be happy to discuss how this experience applies to scaling your accounting operating model.

Best regards,

Xavier Robitaille
