Re : VP, Strategic Finance

Building financial models that guide capital allocation and M&A decisions across a portfolio of software businesses calls for someone comfortable moving between board-level strategy and hands-on execution. That mix of scope and depth is what I've built my career on, across insurance and finance.

At SCOR, I spent four years in the group, including two as chief transformation officer of the investment function, working directly with executive committees to turn financial insight into operating decisions across multiple entities. At Clearwater Analytics, as senior programme director, I ran several parallel implementations of a SaaS record-to-report solution, with monthly sponsor committees at executive leadership level and consolidated management of deliverables, milestones and resources on a dedicated tool, Monday.com, including for a Luxembourg client, Luxempart. That kind of cross-entity coordination, reporting to several leadership teams at once, maps directly onto running strategic finance across a portfolio of companies.

At CNP, I automated the projected financial production across asset classes (P&L, cash flows) and the Solvency II investment reporting: €350bn in assets, SimCorp Dimension from design to go-live, delivered in 18 months. Earlier, at Primexis, I built the insurance business unit from scratch: 20 people, 10 clients, €3m in revenue, and a seat on the executive committee. That kind of ownership, building something new and reporting on its performance to leadership, is part of how I work.

I operate as an independent consultant today. Nevertheless, I am perfectly open to a permanent role, directly or after an initial engagement period.

I would be happy to discuss how this cross-entity programme experience applies to the portfolio's M&A pipeline.

Best regards,

Xavier Robitaille
