Re : Director Analyst - Accounting Process and AI Technology

Finance leaders adopting AI-driven accounting need advisors who have actually built and run the underlying record-to-report processes, not just studied them. This role asks for someone who can turn controllership depth into research and advice that senior executives trust. That combination of hands-on delivery and executive-level judgment is where I add the most value.

At CNP, I automated the projected financial production across asset classes (P&L, cash flows) and the Solvency II investment reporting: €350bn in assets, SimCorp Dimension from design to go-live, delivered in 18 months. Building a system executives could rely on meant turning complex accounting and regulatory requirements into daily, auditable output, the same discipline this role calls for.

At Coface, IFRS 9 was rolled out in stages over four years: successive POCs, ECL methodology, accounting schemes, UAT, coordination with the depositary CACEIS. I also created the investment Data Warehouse there, defining fields, table structures, and input and output controls, the kind of technology decision this role asks candidates to guide clients through.

Most recently, as senior programme director at Clearwater Analytics, I ran several parallel implementations of a record-to-report SaaS solution, including for Luxempart in Luxembourg, with monthly sponsor committees at executive level and consolidated tracking of deliverables, milestones, and resources on a dedicated tool (Monday.com). That work ran fully remote and hybrid across teams and time zones, which is how I operate day to day now.

Certified in Generative AI Primer (Vanderbilt, 2026) and GenAI for Account Executives (Yale, 2026), I automate nearly all of my consulting activity through AI agents under Claude or GPT, which keeps me close to the tools this role is meant to advise clients on.

I operate as an independent consultant today. Nevertheless, I am perfectly open to a permanent role, directly or after an initial engagement period.

I would be happy to discuss how this record-to-report and technology transformation experience applies to the research and advisory work this role covers.

Best regards,

Xavier Robitaille
