**Re : Financial Services Consultant (Remote)**

Jobs Ai's client needs financial infrastructure that scales with the gig economy: compliance frameworks, transaction reporting, and risk controls that hold up across jurisdictions and rapid growth. That combination of regulatory rigor and reporting architecture built to move fast is where I've spent the last 25 years, in insurance and in finance.

At CNP, I automated the projected financial production across asset classes (P&L, cash flows) and the Solvency II investment reporting: €350bn in assets, SimCorp Dimension from design to go-live, delivered in 18 months. That kind of reporting infrastructure, built once and trusted by regulators and finance teams alike, is what a growing transaction platform eventually needs too.

At Coface, I rolled out IFRS 9 in stages over four years: successive POCs, ECL methodology, accounting schemes, UAT, coordination with the custodian CACEIS. I also built the investment Data Warehouse from scratch, defining fields, table structures, and input and output controls. Getting the data model right before automating on top of it is usually what separates a compliance report that holds up from one that breaks every quarter.

As senior programme director at Clearwater, I ran several parallel implementations of a SaaS R2R solution, with monthly sponsor committees at executive level and consolidated tracking of deliverables, milestones, and resources on Monday.com, including for Luxempart in Luxembourg. Keeping several workstreams moving at once without losing sight of any single client's risk exposure is close to what this engagement asks for.

Certified in Generative AI Primer (Vanderbilt, 2026) and GenAI for Account Executives (Yale, 2026), I now run most of my own consulting operations through AI agents on Claude and GPT, which keeps turnaround fast on contract work like this one.

I would be happy to discuss how this experience applies to your client's compliance and reporting needs.

Best regards,

Xavier Robitaille
