Re : Strategic Project Manager (Finance) - Remote

Financial transformation at scale, across finance, actuarial and IT, with reporting that regulators and boards can rely on: that is the specific problem this role is built around, and it sits squarely in the work I have done for the last 25 years in insurance and finance.

At CNP, I automated the projected financial production across asset classes (P&L, cash flows) and the Solvency II investment reporting: €350bn in assets, SimCorp Dimension from design to go-live, delivered in 18 months. That project required the same skill this role calls for: turning complex financial data into models and reports that senior leadership can act on, under a hard deadline and strict regulatory constraints. At Coface, I rolled out IFRS 9 in stages over four years: successive POCs, ECL methodology, accounting schemes, UAT, coordination with the custodian CACEIS. I also built the investment Data Warehouse there, defining the fields, table structure, and input/output controls, work that gave finance teams a single, reliable source for reporting and analysis.

As senior programme director at Clearwater, I ran several parallel implementations of an R to R SaaS solution, with monthly sponsor committees at general management level and consolidated tracking of deliverables, milestones, and resources on Monday.com, including for Luxempart in Luxembourg. Managing cross-functional teams and stakeholders at that level, while keeping budgets, timelines, and ROI visible to leadership, is the core of what this Strategic Project Manager role asks for.

Certified in Generative AI Primer (Vanderbilt, 2026) and GenAI for Account Executives (Yale, 2026), I now run most of my own operations through AI agents on Claude and GPT, which keeps project overhead low even on complex, multi-workstream programmes.

I operate as an independent consultant today. Nevertheless, I am perfectly open to a permanent role, directly or after an initial engagement period.

I would be happy to discuss how this experience applies to your financial infrastructure projects.

Best regards,

Xavier Robitaille
