Re : Change Management Consultant

Kyndryl's clients are moving from pilot programs to enterprise-wide adoption of Microsoft 365 Copilot and agentic AI. That shift depends on executive buy-in and disciplined change management as much as on the technology itself. That is the work I want to take on next.

At SCOR, I spent four years in reinsurance, two of them as chief transformation officer of the investment function, coordinating Finance, Actuarial, IT, and Risk stakeholders through a program with direct executive visibility.

As senior programme director for Clearwater Analytics, I led several parallel implementations of a record-to-report SaaS solution, running monthly sponsor committees at executive committee level and managing deliverables, milestones, and resources across programs on a single dedicated tool, Monday.com. One of those engagements was with Luxempart, in Luxembourg.

Certified in Generative AI Primer (Vanderbilt, 2026) and GenAI for Account Executives (Yale, 2026), I now run most of my own consulting operations through AI agents built on Claude and GPT. That gives me a working, daily view of how AI adoption unfolds inside an organization, not something I only read about in a briefing deck.

My career, 25 years, has been in insurance and finance, conducted daily in both French and English, which fits the bilingual profile you're looking for in the Toronto or Montreal market.

I operate as an independent consultant today, which matches the structure of this engagement, and I'm available to run it across the full August 2026 to December 2027 period.

I would be happy to discuss how this multi-program, executive-facing delivery experience applies to Kyndryl's Copilot and agentic AI adoption engagements.

Best regards,

Xavier Robitaille
