Re : Senior Implementation Manager

Oliver James is staffing a 12-month delivery mandate that sits at the intersection of systems migration, senior stakeholder governance, and cross-functional team management in a financial services environment. That combination, technical depth plus delivery discipline plus governance at director level, is where I have spent the last 20 years of my career.

At Clearwater Analytics, I worked as senior programme director, running several parallel implementations of a SaaS reporting-to-regulatory (R to R) solution, including for the Luxembourg client Luxempart. I managed monthly sponsor committees at general management level and consolidated deliverables, milestones and resources across projects on Monday.com. The work was fully remote, which is how I operate day to day: I am comfortable running governance, stakeholder alignment and cross-functional coordination through distributed tools, and I would bring the same discipline to a hybrid Dublin setup.

Before that, at CNP, I automated the projected financial production across asset classes (P&L, cash flows) and the Solvency II investment reporting on €350bn in assets, taking the SimCorp Dimension implementation from design to go-live in 18 months. At Coface, I rolled out IFRS 9 in stages over four years, POC cycles, ECL methodology, accounting schemes, UAT, and coordination with the depositary CACEIS, and built the investment Data Warehouse from field-level design to input and output controls. Both required the same governance and stakeholder management that this role demands, across finance, actuarial, IT and operations teams of up to 16 people.

I operate as an independent consultant today. Nevertheless, I am perfectly open to a permanent role, directly or after an initial engagement period, and a 12-month daily-rate contract fits that model well.

I would be happy to discuss how this experience applies to the systems and stakeholder landscape at Oliver James's client.

Best regards,

Xavier Robitaille
