

Roch Systems

July 31, 2026

Re : Senior Project Manager

Roch Systems runs complex, multi-stakeholder technology projects for clients across education, government, and the private sector, and this role sits right at the point where scope, budget, and stakeholder alignment either hold together or don't.

I've led that kind of delivery for 25 years in insurance and in finance, on programs with the same shape: multiple workstreams, technical and business stakeholders who don't naturally speak the same language, and a fixed deadline. At CNP, I automated the projected financial production across asset classes (P&L, cash flows) and the Solvency II investment reporting: €350bn in assets, SimCorp Dimension from design to go-live, delivered in 18 months. At Coface, I rolled out IFRS 9 in stages over four years: successive POCs, ECL methodology, accounting entries, testing, and coordination with the custodian CACEIS, while also building a Data Warehouse for investments, covering field definitions, table structure, and input and output controls. More recently, as senior programme director at Clearwater, I ran several parallel implementations of a SaaS R2R solution, with monthly senior sponsor committees and consolidated tracking of deliverables, milestones, and resources on Monday.com, including for a Luxembourg client, Luxempart.

Across these engagements, the constant has been running IT and finance transformation projects where vendor management, risk tracking, and executive reporting all have to work at once, not in sequence. That's the profile Roch Systems is describing for this role: someone who can hold the plan, the risk log, and the stakeholder map together without dropping any of them.

I operate as an independent consultant today. Nevertheless, I am perfectly open to a permanent role, directly or after an initial engagement period.

I would be happy to discuss how this experience applies to Roch Systems' current client engagements.

Best regards,

Xavier Robitaille
