Re : Integration Project Manager

SixteenFifty is running a global S/4HANA transformation with integration workstreams across multiple countries, platforms and external system integrators, from testing through cutover, go-live and hypercare. That scope, and the need for someone who can hold governance and dependencies together across an international environment, is where I want to put my experience to work.

In insurance and in finance, this kind of coordination has run through my last three assignments.

At Clearwater Analytics, I served as senior programme director, running several parallel implementations of a SaaS R2R solution, including for the Luxembourg client Luxempart. Monthly steering committees at C-level, and consolidated management of deliverables, milestones and resources on a dedicated tool (Monday.com), kept multiple workstreams aligned across teams and vendors, the same governance discipline this program needs from cutover through go-live.

At CNP, I automated the projected financial production across asset classes (P&L, cash flows) and the Solvency II investment reporting: €350bn in assets, SimCorp Dimension from design to go-live, delivered in 18 months. That program required the same coordination between business, technical teams and system integrators this role calls for.

At Coface, I rolled out IFRS 9 in stages over four years: successive POCs, ECL methodology, accounting schemas, UAT, and coordination with the custodian CACEIS. I also built a Data Warehouse for investment data there, defining the fields, table structure, and the input and output controls, work close to the master data governance and data quality this role requires.

I operate as an independent consultant today, on a freelance/contract basis that matches this assignment.

I would be happy to discuss how this experience applies to the integration workstreams on this program.

Best regards,

Xavier Robitaille
