Re : Business Transformation Project Manager

Delivering an enterprise transformation across platform, pharmacy operations, patient access, distribution and data & AI, phased across six milestones, needs a project manager who can own the full Transformation Office portfolio, not a single workstream. That combination of scale and multi-threaded governance is where I've built my track record.

At Clearwater Analytics, I acted as senior programme director. I piloted several parallel implementations of a record-to-report SaaS solution, including for the Luxembourg client Luxempart, running monthly sponsor steering committees at executive level and managing deliverables, milestones and resources on a single dedicated tool, Monday.com, across concurrent workstreams.

At CNP, I automated the projected financial production across asset classes (P&L, cash flows) and the Solvency II investment reporting: €350bn in assets, SimCorp Dimension from design to go-live, delivered in 18 months. That project required coordinating finance, actuarial and IT teams around one milestone plan, the same discipline needed to connect platform delivery with business readiness on a program like this.

At Coface, I rolled out IFRS 9 in stages over four years: successive POCs, ECL methodology, accounting schemes, UAT, and coordination with the custodian CACEIS. I also built the investment Data Warehouse there, defining fields, table structure, and input/output controls, a concrete version of the data readiness and quality validation this role tracks across workstreams. At SCOR, I spent 4 years, 2 of them as chief transformation officer of the investment function, connecting operating model change with reporting and governance across business and technology teams.

I operate as an independent consultant today. Nevertheless, I am perfectly open to a permanent role, directly or after an initial engagement period.

I would be happy to discuss how this experience applies to the Transformation Office's portfolio.

Best regards,

Xavier Robitaille
