Re : Finance Change Project Manager

Standard Life's Finance Change agenda sits exactly where this role points: technology-enabled transformation delivered inside an actuarial-led environment, under tight governance and senior stakeholder scrutiny.

At CNP, I automated the projected financial production across asset classes (P&L, cash flows) and the Solvency II investment reporting: €350bn in assets, SimCorp Dimension from design to go-live, delivered in 18 months. Governance ran through monthly steering committees with CFO and actuarial stakeholders, and the plan held through data migration, parallel runs and UAT.

At Coface, I rolled out IFRS 9 in stages over four years: successive POCs, ECL methodology, accounting schemes, UAT, and coordination with the depositary CACEIS. I also built the investment Data Warehouse from scratch there, defining the fields, table structure, and input and output controls the reporting depended on.

As senior programme director at Clearwater, I ran several parallel SaaS R2R implementations at once, with monthly sponsor committees at CxO level, including for Luxempart, and a consolidated view of deliverables, milestones and resources on a dedicated tool (Monday.com). Four years at SCOR, two of them as chief transformation officer of the investment function, gave me the reinsurance and capital management context this role's actuarial exposure calls for. I completed the full examination track of the Centre d'Études Actuarielles in 2004 and hold a PMP certification, which matches the recognised project management qualification you list.

I operate as an independent consultant today. Nevertheless, I am perfectly open to a permanent role, directly or after an initial engagement period.

I would be happy to discuss how this experience applies to Standard Life's Finance Change portfolio.

Best regards,

Xavier Robitaille
