Re : Business Requirements Lead (Syndicate Reporting) | Specialty Insurance Finance Transformation | London Hybrid | Immediate Start

Specialty insurance finance transformation demands reporting that keeps pace with syndicate-level regulatory obligations while the underlying processes are rebuilt around low-code delivery. That combination of Lloyd's-grade complexity and business requirements leadership is exactly the kind of assignment I look for.

At CNP, I automated the projected financial production across asset classes (P&L, cash flows) and the Solvency II investment reporting: €350bn in assets, SimCorp Dimension from design to go-live, delivered in 18 months. That work sat at the same intersection this role occupies: finance stakeholders, technology teams, and regulatory obligations that don't move for a project timeline. At Coface, I rolled out IFRS 9 in stages over four years, running successive POCs, defining the ECL methodology and accounting schemes, leading UAT, and coordinating with the depositary CACEIS. I also built the investment Data Warehouse from the ground up: field definitions, table structure, input and output controls. Both required the same discipline this role calls for, translating business and regulatory requirements into specifications that technology teams can actually build against, and getting business SMEs and IT to agree on what "done" looks like.

More recently, as senior programme director at Clearwater, I ran several parallel SaaS Record-to-Report implementations for clients including Luxempart, with monthly sponsor committees at C-level and consolidated tracking of deliverables, milestones, and resources on Monday.com. That mission was fully remote and hybrid by design, so working 2 to 3 days a week in a City office alongside distributed technology teams is a familiar rhythm, not an adjustment.

I operate as an independent consultant today. As a contractor who is a non-UK Tax resident, based overseas, IR35 does not apply to me.

I would be happy to discuss how this experience maps onto the Syndicate Reporting workstream.

Best regards,

Xavier Robitaille
