Re : Capital Optimization Director

Wafa Assurance Sénégal is asking a Capital Optimization Director to read capital structure, portfolio performance and regulatory change as one system, then turn that reading into decisions that treasury, finance and business units can execute. That is where I want to put 25 years of work in insurance and in finance.

Four years at SCOR, two of them as chief transformation officer of the investment function, gave me direct responsibility for capital allocation decisions and portfolio performance at group level, working across actuarial, finance and risk teams.

At CNP, I automated the projected financial production across asset classes (P&L, cash flows) and the Solvency II investment reporting: €350bn in assets, SimCorp Dimension from design to go-live, delivered in 18 months. That work sits exactly where scenario analysis, regulatory monitoring and financial modeling meet.

As senior programme director for Clearwater Analytics, I ran several parallel implementations of a SaaS record-to-report solution, with monthly sponsor committees at executive level and consolidated tracking of deliverables, milestones and resources on a dedicated tool (Monday.com), including for Luxempart in Luxembourg. That work depended on coordinating finance, treasury and business teams around the same numbers, which is the core of this role.

I operate as an independent consultant today. Nevertheless, I am perfectly open to a permanent role, directly or after an initial engagement period.

I would be happy to discuss how this experience in capital allocation and regulatory reporting could apply to Wafa Assurance Sénégal's investment portfolio.

Best regards,

Xavier Robitaille
