Re : Director of Financial Reporting & Controls

Ageas UK is bringing financial reporting and controls together across Ageas, esure and Saga at a point where regulatory reporting, statutory accounts and a stronger control environment all have to move in the same direction. That is the kind of complexity I look for.

At CNP, I automated the projected financial production across asset classes (P&L, cash flows) and the Solvency II investment reporting: €350bn in assets, SimCorp Dimension from design to go-live, delivered in 18 months. At Coface, IFRS 9 rolled out in stages over four years: successive POCs, ECL methodology, accounting schemes, UAT, and coordination with the depositary CACEIS. On the same programme, I built the investment Data Warehouse, from field definitions and table structures to input and output controls. Earlier at Coface, as Head of Technical Accounting, I led a team of 16.

Four years at SCOR, two of them as chief transformation officer of the investment function, put me in front of Audit Committees and senior finance leadership on the governance and reporting judgment calls this role is built around. As senior programme director for Clearwater Analytics, I ran several parallel implementations of an R to R SaaS solution, with monthly sponsor committees at executive level and consolidated tracking of deliverables, milestones and resources on Monday.com, including for Luxempart in Luxembourg.

I completed the full examination track of the Centre d'Études Actuarielles in 2004, which underpins the technical reporting judgment this role requires.

I operate as an independent consultant today. Nevertheless, I am perfectly open to a permanent role, directly or after an initial engagement period.

I would be happy to discuss how this experience applies to bringing Ageas, esure and Saga onto one reporting and controls framework.

Best regards,

Xavier Robitaille
