

Crossing Hurdles

July 31, 2026

Re : Investment Banking Consultant | \$65/hr Remote

Crossing Hurdles trains AI models to review financial models, build pitch books, structure deals, and curate datasets. That kind of training data needs someone who has actually built and audited financial data structures, not just described them.

At Coface, I created a Data Warehouse for placements from scratch: the fields, the table structure, and the controls on inputs and outputs. That work ran alongside a four-year rollout of IFRS 9, staged through successive POCs, ECL methodology, accounting schemas, UAT, and coordination with the depositary CACEIS. At CNP, I automated the projected financial production across asset classes (P&L, cash flows) and the Solvency II investment reporting on €350bn in assets, with SimCorp Dimension taken from design to go-live in 18 months. Both projects needed the same precision in data structure and financial modeling that training datasets for AI need to be built on.

I completed the full examination track of the Centre d'Études Actuarielles in 2004, which gives me depth on the modeling side beyond standard finance training. On the AI side, I hold Generative AI Primer (Vanderbilt, 2026) and GenAI for Account Executives (Yale, 2026) certifications, and I now run most of my own consulting operation through AI agents under Claude and GPT. Training models with financial judgment is close to work I already do for myself.

The posting lists this as an Associate-level engagement. If that reflects the scope of one specific data-training module, the flexible 10-40 hour week works well for me. If not, I can just as easily take on a broader review role across the financial modeling and deal-structuring workstreams.

I operate as an independent consultant today; nevertheless, I am perfectly open to a permanent role, directly or after an initial engagement period.

I would be happy to discuss which module or workstream would make the best starting point.

Best regards,

Xavier Robitaille
