Re : Senior Implementation Consultant - Client Reporting

SimCorp's Client Reporting practice sits at a specific intersection: data modelling, layout design, and the digital portal all have to work together so clients actually get usable output from Dimension. That EMEA Data & Communications team needs someone who has lived on both sides of that problem, technical build and client-facing delivery.

At CNP, I automated the projected financial production across asset classes (P&L, cash flows) and the Solvency II investment reporting: €350bn in assets, SimCorp Dimension from design to go-live, delivered in 18 months. That covered the full chain your role describes: data modelling, configuration, testing, deployment, and requirements workshops with finance and actuarial stakeholders who needed the output translated into something usable.

At Coface, I built a Data Warehouse for investments, covering field definitions, table structure, and input/output controls, then rolled out IFRS 9 in stages over four years: successive POCs, ECL methodology, accounting schemes, UAT, and coordination with the depositary CACEIS. That work required the same SQL fluency and structured data thinking your job description asks for, applied under audit scrutiny rather than in a sandbox.

More recently, as senior programme director at Clearwater, I ran several parallel SaaS implementations remotely, including for Luxempart in Luxembourg, with monthly sponsor committees at executive level and consolidated tracking of deliverables, milestones, and resources on Monday.com. Hybrid and remote delivery is standard practice for me, not an adjustment.

I operate as an independent consultant today. Nevertheless, I am perfectly open to a permanent role, directly or after an initial engagement period. As a contractor who is a non-UK Tax resident, based overseas, IR35 does not apply to me.

I would be happy to discuss how this experience maps onto the Client Reporting team's current implementation priorities.

Best regards,

Xavier Robitaille
