Re : Program Director

A multi-year transformation of core platforms across multiple lines of business, reporting to both COO and CTO, is exactly the kind of program where governance discipline determines whether the target architecture ever gets delivered rather than just designed.

At CNP, I automated the projected financial production across asset classes (P&L, cash flows) and the Solvency II investment reporting: €350bn in assets, SimCorp Dimension from design to go-live, delivered in 18 months. That program involved the same mix this role requires: multiple business lines, a demanding regulatory backdrop, and a platform decision that had to hold across the whole organization, not just one function.

At Coface, I rolled out IFRS 9 in stages over four years: successive POCs, ECL methodology, accounting schemes, UAT, and coordination with the custodian CACEIS. I also built the investment Data Warehouse there, from field definitions to table structure to input and output controls, and ran a team of 16. Multi-vendor coordination and long-horizon delivery under governance pressure are not new territory for me.

More recently, as senior programme director at Clearwater, I ran several parallel SaaS R to R implementations for clients including Luxempart, with monthly sponsor committees at general management level and consolidated tracking of deliverables, milestones, and resources on Monday.com. That work was fully remote and hybrid by design, across time zones and stakeholder groups, which is how I operate by default today.

Us3 Consulting's clients need someone who can sit between COO, CTO, and CIO without losing the thread on delivery, and that's the position I've held on similar programs for the past decade.

I operate as an independent consultant today. Nevertheless, I am perfectly open to a permanent role, directly or after an initial engagement period.

I would be happy to discuss how this experience applies to the Benelux platform program.

Best regards,

Xavier Robitaille
