Re : Fund Accounting Manager

Running daily NAV production and valuation across a portfolio of complex real estate and alternative fund structures, while managing a team and coordinating offshore centres, calls for technical depth and disciplined delivery under SLA pressure.

At a major French insurer, I rebuilt investment accounting production under Solvency II and IFRS 9, covering a 350bn€ portfolio. I redesigned the securities sub-ledger reconciliation process and cleared a multi-year suspense account backlog through targeted UAT campaigns and VBA-built adjustment entries, cutting the open-items count to near zero within the reporting cycle. I led the accounting migration and interface cutover for a SimCorp Dimension implementation, coordinating finance, IT and offshore teams to keep reconciliation breaks under control during the transition and deliver on a fixed go-live date. I also redesigned the monthly closing process for the same entity, cutting the close from D+10 to D+5 by removing manual touchpoints and tightening the control plan. Each of these called for what this role asks: reviewing production against a deadline, escalating risk promptly, and coordinating stakeholders across time zones.

I haven't worked on real estate or private equity fund structures directly; my valuation and reconciliation experience is on the insurance investment side.

Remote and hybrid coordination is routine for me. My last engagement, on Clearwater Analytics, ran fully distributed across time zones and offshore support. Happy to walk through the SimCorp and reconciliation work on a call.
