I bring 25 years of insurance and finance expertise directly aligned with your IT Economics mandate. My background spans PMO governance, financial planning and control, and the ability to translate between technical delivery and C-suite reporting—exactly what drives value in Group IT Spend management.

At BNP Paribas, I led IT cost planning and benefit realization for a €800M transformation program across 12 operating entities. I designed the reporting framework that tracked both run spend and change portfolio ROI, identified €45M in unplanned cost drivers through root cause analysis, and rebuilt stakeholder alignment between Finance, Technology, and regional operations when budgets drifted. This taught me how to be credible with both technical and financial audiences—a rare combination, and essential for this role.

More recently at Natixis, I managed the PMO and financial steering for regulatory reporting system delivery across three markets. When scope creep threatened the timeline and budget, I modeled the impact scenario by scenario, presented trade-offs clearly, and secured buy-in from competing priorities. That's the discipline Allianz needs: planning rigor, early warning systems, and the ability to steer without creating friction.

I work as an independent consultant, which means I move fast, own outcomes, and don't wait for permission. I'm also comfortable in Munich and can commit to a full-time role if the challenge is right. The gap between interim consulting and a senior permanent position is real—I'd value a conversation to see if my background and your team's needs align well enough to bridge it.

I'm available for a call at your convenience.
