Re : Domain Architect at Group Finance

NN Group is moving a fragmented Finance-IT landscape onto SAP S4/HANA while keeping IFRS 17, IFRS 9, Solvency II, and ESG reporting obligations intact. That combination, regulatory depth plus a live architecture migration, is where I want to work next.

At CNP, I automated the projected financial production across asset classes (P&L, cash flows) and the Solvency II investment reporting: €350bn in assets, SimCorp Dimension from design to go-live, delivered in 18 months. That work sat exactly at the intersection this role covers: translating Finance requirements (closing, reporting, regulatory) into concrete IT solution design, then validating that design against the target architecture as delivery progressed. At Coface, I rolled out IFRS 9 in stages over four years: successive POCs, ECL methodology, accounting schemes, UAT, coordination with the custodian CACEIS. In parallel I built a Finance data warehouse for investments, defining fields, table structure, and input/output controls, the kind of data lineage and definition work your domain needs across General Ledger, Reporting, and Financial Closing. Four years at SCOR, two of them as chief transformation officer of the investment function, gave me the same advisory posture this role asks for: sitting between Finance leadership, IT delivery, and process owners, and turning architecture decisions into something a Product Owner or a CFO can act on without a translation layer.

Most recently, as senior programme director at Clearwater, I ran several parallel SaaS R2R implementations remotely, with monthly sponsor committees at executive level and consolidated tracking of deliverables, milestones, and resources on Monday.com, including for a Luxembourg client, Luxempart. That work was fully hybrid by design, and it's the same mode I'd bring to The Hague: comfortable running architecture governance and stakeholder alignment across distributed teams without losing rigor on timelines or documentation.

I operate as an independent consultant today. Nevertheless, I am perfectly open to a permanent role, directly or after an initial engagement period.

I would be happy to discuss how this experience applies to the Finance domain architecture NN is building around SAP S4/HANA.

Best regards,
