Re : Private Markets Middle Office - Vice President

Leading GAV/NAV production and governance for a global private markets platform while driving automation across fund accounting workflows is a demanding brief, particularly across credit and private equity structures where reconciliation breaks and manual controls tend to concentrate risk. That combination of technical depth and transformation mandate is where I add the most value.

At CNP, I rebuilt the investment accounting production line under Solvency II constraints, covering 350 billion euros in assets under management, delivered in 18 months and on schedule. That work required the same discipline this role calls for: reconciling internal systems against custodian data daily, resolving discrepancies before they compound, and keeping regulatory reporting defensible under scrutiny. I've also led migration and clean-up projects involving VBA-based journal entry construction and suspense account clearing, work that depends on the same attention to detail GAV/NAV calculation demands, and on building controls that hold up once volumes scale. Across these mandates, stakeholder management sat at the center: aligning finance, actuarial, IT and operations teams who each had different priorities and different definitions of "done."

I haven't worked directly on Advent Geneva. My systems background is SimCorp Dimension and Clearwater Analytics, both of which I implemented end to end, so the underlying fund accounting logic is familiar even where the tool isn't.

Remote and hybrid collaboration is standard practice for me. My most recent engagement, with Clearwater, ran fully distributed across time zones without any loss of rigor in delivery or reporting.

Happy to walk through how this maps to the Dublin mandate on a call.
