Re : Accounting and Actuarial Advisory - Senior Manager

Building an insurance advisory practice from market entry to a sustainable business is a different problem than staffing an existing one. CFG's plan to scale FS insurance in France, with actuarial modelling and data analytics as the technical core, needs someone who has already done the technical work under regulatory pressure, not just advised on it from the outside.

At CNP, I rebuilt the investment accounting production line under Solvency II constraints for 350 billion euros in assets, delivered in 18 months, on schedule. That work sits exactly where the role's "complex accounting and risk modelling issues" live: IFRS 9 classification, amortized cost, ECL methodology, and the sub-ledger architecture behind it. On the regulatory reporting side, I've worked ORSA, RSR/SFCR, and QRT production directly, and led IFRS 17 and IFRS 9 implementation projects end to end, including SimCorp Dimension and Clearwater Analytics builds from design to production. That combination, actuarial qualification (CEA, 2004), hands-on system implementation, and PMO discipline (PMP, 2025) to run the project itself, is rare in one profile and matches what a Senior Manager here would need to own from day one.

I work as an independent consultant today, but I'm open to a permanent role, either directly or after an initial mission period. Happy to discuss over a call.
