As a senior finance consultant with 25 years in insurance and financial services, I bring the technical accounting depth and delivery discipline this role requires. I've spent my career at the intersection of complex reporting, regulatory change, and stakeholder alignment—exactly what this Technical Accounting Manager position demands.

Most recently, I led technical accounting assessments and statutory reporting redesigns for mid-market insurers navigating IFRS and UK GAAP transitions. On one 18-month engagement, I designed and embedded a new technical accounting control framework across three legal entities, reducing audit queries by 60% and accelerating month-end close by 10 days. I've also supported three acquisitions from due diligence through post-close accounting integration, working directly with senior finance leadership, external auditors, and transaction counsel.

What positions me well here: I speak auditor fluently. I thrive on technical problem-solving and regulatory implementation work. I'm comfortable operating in high-visibility roles where precision and stakeholder confidence matter. The hybrid model and 12-month timeline suit my consulting practice.

One honest thing: I've worked as an independent consultant for the last five years. This role is a full-time embedded contract, which is different from my recent pattern. I'm genuinely interested in it—the technical depth and strategic exposure appeal to me—but I want to be direct about that shift.

I'm based in France but have worked across UK and EU regulated entities. Happy to discuss logistics and my availability to start.
