

Dear HFG Insurance Recruitment,

I'm writing to express interest in the Technical Accounting Manager role at your organisation. With 25 years in insurance and finance—the last decade focused specifically on technical accounting, regulatory reporting, and accounting standards implementation—I bring both the depth you need and the ability to operate effectively in high-stakes, visible roles.

My background is directly aligned with your requirements. I hold ACA equivalent credentials and have spent years preparing technical accounting papers, leading assessments across UK GAAP and IFRS frameworks, and supporting complex transactions including acquisitions and regulatory change implementations. I've worked as interim Finance Manager and AMOA across leading insurers, partnering closely with auditors, FP&A teams, and senior finance stakeholders on reporting deliverables and control improvements.

In one recent 18-month engagement, I redesigned the technical accounting function for a £2bn insurance subsidiary—establishing governance for IFRS 17 implementation, restructuring the audit interface, and documenting 40+ technical positions ahead of a regulatory review. The result: cleaner statutory accounts, faster close cycles, and significantly improved auditor confidence. This is exactly the kind of high-visibility, technical problem-solving work your role demands.

I should be direct about one thing: I'm currently structured as an independent consultant. I'm not looking to convert that arrangement immediately into permanent employment, but I'm genuinely interested in this 12-month fixed-term contract. The timeframe, the hybrid model, and the scope of technical and regulatory exposure align with what I'm seeking right now.

I'm ready to hit the ground running and would welcome a conversation about how I can support your finance team's technical agenda.

Best regards,

Xavier Robitaille
