Re : Reinsurance Technical Accountant - Remote

Wakam is rolling out xLayer while keeping the reinsurance sub-ledger accurate in parallel, which means settlements have to hold up while the platform underneath the team is still moving. That combination, reconciliations under a live system change, is where most of my work has sat.

At Coface, I ran Technical Accounting as Head of Technical Accounting, with a team of 16, on the treaty and settlement side of the business (2004-2005). Later, back at Coface, I rolled out IFRS 9 in stages over four years: successive POCs, the ECL methodology, the accounting schemes, UAT, and coordination with the depositary, CACEIS. I also built the investment Data Warehouse there: field definitions, table structure, and input/output controls, the kind of documentation that turns an audit request into a formality instead of a scramble.

Before that, at Mazars, I audited reinsurance entities, including SCOR and reinsurance entities at AXA, along with several run-off books, so treaties, bordereaux, and recoverables aren't new territory.

At CNP, I automated the projected financial production across asset classes (P&L, cash flows) and the Solvency II investment reporting: €350bn in assets, SimCorp Dimension from design to go-live, delivered in 18 months. That project is where I learned how to keep closing and reconciliation reliable through a full system migration, which is close to what xLayer UAT will demand from whoever owns it day to day.

Certified in Generative AI Primer (Vanderbilt, 2026) and GenAI for Account Executives (Yale, 2026), I automate today nearly all of my own business activity through AI agents under Claude or GPT. That's the same approach your posting asks for: automation for standard checks, reconciliations, and reporting packs, without losing traceability.

I operate as an independent consultant today. Nevertheless, I am perfectly open to a permanent role, directly or after an initial engagement period.

I would be happy to discuss how this experience applies to the xLayer rollout.

Best regards,

Xavier Robitaille
