Re : Actuarial Non Life Senior Manager - Hybrid

Deloitte's Actuarial team in Dublin is building out non-life advisory across reserving, Solvency II, IFRS 17, and portfolio transfers, while also asking managers to drive M&A due diligence and multi-disciplinary work with audit and risk. That combination, technical actuarial depth plus commercial delivery across teams, is where I've spent most of my career.

At CNP, I rebuilt investment accounting production under Solvency II constraints for a 350 billion euro book, delivering the redesign in 18 months, on schedule, with the reporting able to hold up under regulatory scrutiny. On IFRS 17 and IFRS 9 transitions, I've worked the technical mechanics directly, ECL modeling, amortized cost, CSM calculations, and the accounting schemes underneath them, which is the same layer where Solvency II and IFRS 17 reporting decisions actually get made or unwound. I've also run cross-functional programs where actuarial, finance, IT, and risk stakeholders had conflicting timelines and no shared plan, and my job was to build the governance and sequencing that got the project moving again. That's close to what a peer review or portfolio transfer engagement needs: someone who can hold the technical line and manage the room at the same time.

Hybrid work isn't new territory for me. At Clearwater, I ran distributed delivery across time zones and tools without losing the pace clients expected, so the Dublin hybrid setup fits how I already work.

Happy to walk through any of this on a call.
