Re : Senior Project Manager

Eurolife FFH's brief pairs three different worlds: corporate transformation, insurance product development, and IT-for-IT delivery, each pulling in underwriting, actuarial, operations, and regulatory stakeholders. Running that portfolio without losing coherence between sponsors and technical teams is what makes or breaks this role.

At CNP, I rebuilt the investment accounting production line under Solvency II constraints, 350bn€ of assets under management, delivered in 18 months and on schedule, coordinating actuarial, finance, and IT throughout. That kind of coordination across actuarial, underwriting, and regulatory teams is exactly what insurance product development initiatives need to move from design to launch without gaps. I've also led SimCorp Dimension and Clearwater Analytics implementations end to end, from design through data migration, UAT, and interface cutover, the kind of IT-for-IT work this role covers. Beyond system builds, I've taken over complex, stalled projects and rebuilt governance from scratch: steering committees, risk frameworks, and reporting that gives sponsors and delivery teams the same view of status and risk.

My depth sits mainly on the investment and regulatory side of insurance, less on P&C underwriting workflows specifically. Given the breadth of your portfolio, that's worth naming upfront.

Happy to walk through how this maps to your project pipeline over a call.

Xavier Robitaille
