Re : Transformation Manager

Harmonising a P&C operating model across Benelux while keeping architectural integrity intact, across multiple lines of business and a multi-vendor delivery landscape, is a governance problem as much as a technology one. That's the part of transformation work where I've spent most of my career.

At CNP, I rebuilt investment accounting production under Solvency II constraints: 350 billion euros in assets under management, delivered on time in 18 months, with full regulatory sign-off. That work required the same discipline this role calls for: phased roll-out, scope control, and alignment between business and technical teams who don't naturally speak the same language. I've also led migration programs that moved core accounting interfaces and data between systems without breaking daily production, including UAT cycles and cahier des charges definition, work that depends entirely on multi-vendor coordination and keeping steering committees informed without drowning them in detail. Across these programs, the constant has been executive-level stakeholder management: chairing governance forums, defending scope decisions to boards, and building internal capability so the program doesn't depend on me once it's running.

My direct platform experience sits in investment and life/savings lines rather than P&C core systems specifically. The program discipline, harmonisation logic, and regulatory rigor transfer directly.

I work comfortably in hybrid settings, remote-first governance included, as my most recent engagement at Clearwater confirmed. Happy to discuss over a call.

Xavier Robitaille
