Dear Hiring Manager,

I'm writing to express my interest in the Fund Accounting Manager role at Morgan McKinley in Dublin.

Over 25 years in finance and insurance, I've built expertise precisely where this role sits: complex fund operations, regulatory compliance, team leadership, and stakeholder alignment under pressure. As a senior consultant, I've spent the last decade working inside finance teams on maternity cover assignments, interim Finance Manager roles, and transformation mandates—managing similar portfolios, overseeing custodian relationships, reconciling investment records, and preparing tax filings across multiple jurisdictions.

Two examples: I led a 12-month interim assignment redesigning the closing and reporting cycle for an institutional portfolio, working directly with investment teams, valuers, and tax advisers. That taught me how to move quickly on withholding tax claims and quarterly valuation reporting while maintaining control standards. Earlier, I managed reconciliation oversight and custodian KPI reviews for a €2B+ fund portfolio, which required the same attention to settlement detail and external relationship management you need here.

I have the accounting foundation you're looking for—professional credentials in finance and audit—and I understand the rigour fund accounting demands. The honest gap: I've worked as a consultant and interim manager, not in a traditional employment contract. But for a 12-month fixed term, that's actually a fit. I'm available to start quickly and I work well inside teams.

I'd welcome a call to discuss how my experience maps to your needs.

Best regards,

Xavier Robitaille
