Re : Senior Accountant - Insurance industry (m/f)

Rebuilding technical insurance accounting under LuxGAAP while running unit-linked fund processes through outsourced administrators, and preparing CAA reporting alongside it, is not a routine close-and-report brief. It calls for someone comfortable owning both the accounting mechanics and the coordination across outsourced managers.

That mix is close to what I've built my recent work around. At Clearwater, I worked on investment accounting reconciliations across non-linked portfolios supported by outsourced managers, tracking valuation differences between management systems and the general ledger and clearing suspense items in a multi-entity setup, similar to the reconciliation and technical suspense analysis this role needs. Earlier, at CNP, I rebuilt investment accounting production under Solvency II constraints on a 350bn€ book, delivered on an 18-month timeline, which required the same discipline around closing, controls and regulatory reporting the CAA work will demand here. I've also built VBA-driven OD generation and data migration processes to clear legacy suspense accounts, work that maps directly onto the process optimization and multi-company reconciliation this position covers.

I haven't worked with MS Dynamics or Anaplan directly, though I've implemented and run SimCorp Dimension and Clearwater from design through production, which covers similar ground on system logic and data flow.

Remote and hybrid setups are standard practice for me; my Clearwater work ran fully distributed with outsourced partners across time zones. Happy to walk through specifics on a call.
