I bring 25 years of insurance and finance expertise directly into the operations transformation space zeb pursues. My value isn't general—it's specific to the intersection where process redesign meets regulatory constraint, organizational complexity, and real delivery pressure.

Over the last decade, I've led operating model transformations and end-to-end process optimization in insurance, most recently redesigning claims and policy administration workflows for mid-market carriers. One project: mapped a fragmented P&L reporting structure across three legacy systems into a unified monthly close—cut reporting cycle from 15 to 8 days while embedding audit controls. Another involved reengineering an underwriting intake process that reduced cycle time 40% and cut manual handoffs by 60%. The pattern is consistent: I diagnose root causes in workshops, model the target state quantitatively, and stay through implementation to ensure the operating model actually sticks.

What resonates with your brief: I understand insurance business topology (composite, life, health), I speak both process architecture and IT delivery language, and I'm comfortable holding the line when optimization proposals collide with legacy constraints. I've managed cross-functional teams through organizational redesign—the awkward part where people, incentives, and systems have to align.

One real gap: I've worked as an independent consultant and interim manager, not in embedded management consulting. That means I bring client-side discipline and delivery pressure, but I'm stepping into zeb's team structure and project velocity as a new environment. I learn fast and I'm direct about what I don't know.

I'm ready to move to Frankfurt. Let's talk about a specific transformation challenge you're advising on right now—I can probably add real perspective quickly.
